

UTAC

CABLE STAPLES
MADE IN SWEDEN

R5
F8
Composite
Cable Staples

Use the UTAC R5 or F8 cable staples to attach your round and flat cables to baseboards, door frames etc. Its white colour makes it inconspicuous and since it is coloured through you can just shear it off without it being very noticeable.

Made for two-handed electricians

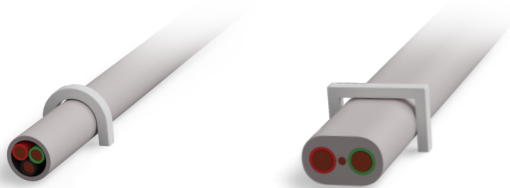

Have you ever wished for a third hand to hold the clip when you hammer down a cable? With the UTAC cable staples from Plasa Fastening there is no need for that, just hold the cable and snap it down with our handy tools!

Field tests have shown that the UTAC staples are 30% faster to use than ordinary cable clips.

Safety first!

Even though you are a careful worker, accidents can happen, and when they do it's reassuring to know that Utac staples are made of a nonconductive material. No child or adult will be electrocuted by touching a Utac staple.

Apart from being safe, the Utac polymer is also tough as nails! With a tensile strength of 180 MPa (26000 psi) you will not break it by pulling at the cable.

R5 FOR ROUND CABLES UP TO 5MM	R5 White	quantity 520	art.nr. 15044	quantity 6500	art.nr. 15023
